

1. Essential Core Utilities (DOM & Logic Basics)

- **Calculator:** Operations chain game ra keyboard inputs handle game logic.
- **Stopwatch / Timer:** `setInterval` ra time formatting (00:00:00) ko mathematical logic.
- **Todo List / Task Manager:** Tasks insert, toggle, delete ra tracking game app.
- **Digital Clock / Alarm:** Local computer time query game accurate UI dynamic banaune tracker.
- **Tip Calculator:** Dynamic calculation, percentage calculations, ra split bill operations.

2. Data Management & Storage (LocalStorage Focus)

- **Notes App:** Text updates haru live capture game browser database (LocalStorage) ma real-time safe rakhne utility.
- **Expense Tracker:** Incomes ra expenses arrays data handle game, `reduce()` function le calculation display game tracker.
- **Budget Planner:** Strict monthly parameters fix game, remaining balance real-time sync handle game tracker.
- **Habit Tracker:** Strike counters generate game ra days check state structure safe rakhne grid view.
- **Shopping Cart Simulation:** Memory array storage handle game ra UI total price update dynamic trigger.

3. API & Async Data Handling (Network Operations)

- **Weather App:** External REST API target game (`Fetch / Async Await`), loading spinners state maintain game ra live weather conditions visual map dynamic updates trigger game web application.
- **Recipe Finder:** Target keyword parameters fetch execution ra complex JSON nesting destructured view component updates.
- **Movie Search Directory:** Debounce operations implementation, image fallbacks handling ra pagination layout structures tracking.
- **Crypto Live Tracker:** `setInterval` automated fetch execution or WebSockets trigger parsing dynamic ticker components updates.
- **Dictionary App:** Custom dynamic query handling, multi-layered error parsing layouts framework.

4. Interactive Quizzes & Logic Engine

- **Quiz App:** Multi-step array traversal, dynamic score state maintenance, ra timer-based auto-submit architecture.
- **Flashcard System:** Flip toggle UI mechanics logic, categories filtering arrays operations.
- **Word Counter:** Real-time textarea input character filtering, regex pattern strings tracking variables.
- **Typing Speed Tester:** High precision timestamps interval calculations, string matching performance array indicators indices mapping.
- **BMI Calculator:** Inputs calculation conditional logic dynamic metric blocks tracking.

5. Games & UI Logic (Array Operations)

- **Tic-Tac-Toe:** Multi-dimensional arrays win state evaluations mapping.
- **Rock Paper Scissors:** Computer randomized decision loops mapping versus static choices matching framework variables.
- **Memory Card Game:** State toggles matrix matching logic arrays validations structure patterns.
- **Snake Game (Canvas Basic):** Matrix navigation coordinate changes dynamic canvas renders tracking loop loops.
- **Whack-A-Mole:** Random elements selection iterations timeline logic timers execution.

6. Creative & Productivity Enhancements

- **Markdown Previewer:** Standard strings parsing output renders live template bindings mapping fields.
- **Drawing Canvas:** Event listeners triggers click actions tracker absolute pointer mapping screen grids execution.
- **QR Code Generator:** External dynamic endpoints wrapper payload strings mapping updates framework templates.
- **Password Generator:** Array combinations matching algorithmic strings randomize iterations layout mappings logic variables.
- **Vowel Counter / String Utility:** Custom conditions matching iterations indices values sorting algorithms execution logic trackers
