

1 What is Backend?

Backend bhaneko website ko tyo bhaag ho jaba tapai thichnuhunchha, tara dekhnuhunna. Yo "pachhadi" basera sabai main kaam garchha. [\[1\]](#)

- **Kaam:** Data save garne, logic chalaune, ra security herne.
- **Components:** Server, Database, ra Application Logic.
- **Real-world Example:** Restaurant ma gayera order dine bhae, tapai le dekhne frame Front-end ho. Kitchen ma khana pakne thau chai **Backend** हो। [\[1, 2, 3, 4\]](#)

2 Client vs Server

Yo dubaiko bichma interaction bhae matra internet le kaam garchha.

- **Client:** Request pathaune device (tapai ko Mobile, Laptop, Chrome Browser).
- **Server:** Request line ra response pathaune thau (yo ek computer ho jo 24/7 chalirahanchha).
- **Real-world Example:** Tapai (Client) le cash nikalna ATM Machine (Server) lai request garnubandchha. [\[1, 2, 3\]](#)

3 HTTP Protocol

HTTP (HyperText Transfer Protocol) internet ko euta niyam (Rule) ho. Jasma client ra server le ek-arkasanga kura garchhan. [\[1, 2, 3, 4\]](#)

- **Kaam:** Yo euta bhasha jasto ho, jasje data kasari server ma janchha ra aunchha bhanera fix garchha.
- **Real-world Example:** Postman le chitthi puryaune niyam jastai ho.

4 Request & Response

Internet ma hune harek activity yehi dui kura ma adharit hunchha.

- **Request:** Client le Server lai kehi thau/data khojna pathaune message.
- **Response:** Server le tyo request check garera client lai dine complementary message/data.
- **Real-world Example:** Google ma "weather" search garnu **Request** ho, ra Google le temperature dekhaunu **Response** ho. [\[1, 2\]](#)

5 HTTP Methods

Server sanga k kaam garne ho, tyo HTTP Methods le batauchha. Main methods haru yeta chhan: [\[1\]](#)

- **GET:** Server bata data tannu (e.g., Facebook scroll garnu).
- **POST:** Server ma naya data pathayera save garnu (e.g., Naya Account banaunu).

- **PUT:** Bhairakheko data lai poora change/update garnu (e.g., Profile ko sabai info ferne).
- **PATCH:** Data ko thau ko euta saano part matra ferne (e.g., Password matra change garne).
- **DELETE:** Server bata data hataunu (e.g., Post delete garnu). [[1](#), [2](#), [3](#), [4](#)]

6 Status Codes

Server le pathako Response kasto bhayo bhanera short code ma batayine number ho yo.

- **200 OK:** Kaam safal bhayo.
- **201 Created:** Naya data successfully creation bhayo (POST request ma aunchha).
- **400 Bad Request:** Client ko mistake le request bigriyo.
- **404 Not Found:** Khojiyeko page ba data bhetiyenan.
- **500 Internal Server Error:** Server ko computer ba code ma problem aayo. [[1](#), [2](#), [3](#), [4](#), [5](#)]

7 REST API Basics

API (Application Programming Interface) le dui software lai kura garaunchha. REST chai API banaune euta best standard (tarika) ho. [[1](#), [2](#), [3](#)]

- **Rule:** Yesle URL (Links) haru use garchha. Jastai `/users` ma GET pathaye sabai user aune, POST pathaye naya user थपिने।
- **Faida:** Yo ekdam clear ra mileko hunchha.

JSON (JavaScript Object Notation)

JSON data pathaune ra line sabai bhanda popular format ho. Yo herda short ra bujhnuhune hunchha. [[1](#)]

- **Format Example:**

```
json
{
  "name": "Ram",
  "age": 25,
  "isDeveloper": true
}
```
